

### **Current Remarks on PS-PERMAG 3.3**

PS-PERMAG can be used with operating systems from Windows 7 over Win 8/8.1 up to Windows 11. It demands a DirectX10 or higher compatible graphics adapter.

The installation is done by use of setup.exe. During the installation you will be asked for your serial number, which is printed on your note of delivery (only for the full version).

The use of the software can be learned easily by the help system, which is written in a handbook like stile in many passages.

For the most sorts of magnets there exist examples, which will be stored in the examples directory of your PS-PERMAG program folder.

It is recommended to read the chapter "Introduction" in the help system when you are a beginner with PS-PERMAG.

When you are a beginner you should read the tutorials on [www.permagsoft.com/english/tutorials.html](http://www.permagsoft.com/english/tutorials.html).

By those you should be able to use the main features of PS-PERMAG within about half an hour.
